SLIDING WITH POWER

The effect of DryFluid PowerGlide XT begins where others show their limits. The extremely low friction created by the use allows an incredibly slide effect inconceivable even for professionals. A long-lasting effect as well as a minimal dust and dirt binding were the main aims when developing DryFluid PowerGlide XT.

The extreme slide effect is based on the newest available strong lubricants and additives which heighten the effect. The lubricant components are liquefied with several alcohols in order to permit an easy application. After the evaporation of the alcohol, which provides a great creeping, remains the high end lubricant film. The special quality of this innovative lubricant is shown in different ranges of application, for instance, it is used in industry and workshop applications, as well as in households, hobbies and leisure activities.

A VARIETY OF APPLICATION

Glide Power XT reduces the frictional resistance and provides a complete smooth running also under extreme preconditions. This Power Fluid eliminates the squeaking, creaking and jerking, all this with an astounding long-lasting effect. The fields of applications are sliding bearings, ball bearings, guides, hinges, linkages, joints, shafts and reels.

Typically used in machinery, tools, chains, motor vehicles, locking systems, doors, drawers, gardening tools, sport boats and bikes.

SLIDING POWER FOR PROS:

- Lowest sliding friction under extreme conditions
- High creeping ability
- Wear reduction
- Long-lasting lubricating effects
- Extremely economical
- Water-resistant
- Pressure-resistant
- Dust and dirt repellent
- Excellent material compatibility with all current metal, plastic and natural rubber materials
- Outstanding adhesive and anti-corrosive properties
